Amendments to the Claims:

The following listing of claims replaces all prior versions and listings of the claims in

this application.

1.

Listing of the Claims:

(Currently Amended) A heat-shrinkable multi-layer film comprising a heat-

shrinkable base film exhibiting a percent thermal shrinkage in at least one direction of 5 to

90% as measured by immersing the base film in hot water at 90°C for 30 seconds and,

provided on at least one surface of the base film, at least one layer structure including a layer

(a) formed of a poly(carboxylic acid) polymer (A) and free of polyalcohol, and a layer (b)

formed of a polyvalent metal compound (B), the layers (a) and (b) being in contact with each

other, wherein the layer structure is not oriented, wherein the multi-layer film exhibits a

percent thermal shrinkage in at least one direction of 5 to 90% as measured by immersing the

multi-layer film in hot water at 90°C for 30 seconds, and wherein the multi-layer film

exhibits an oxygen permeability of 100 cm3/(m2-day-MPa) or less as measured at 30°C and a

relative humidity of 80% after thermal shrinkage treatment.

2. - 4. (Cancelled).

5. (Previously Presented) A heat-shrinkable multi-layer film according to claim 1,

wherein the ratio of the total thickness of a gas-barrier layer formed of the layers (a) and (b)

which are in contact with each other to that of the base film is 0.001 to 0.5.

(Cancelled).

Application Serial No. 10/554,170

Amendment dated March 12, 2010

Reply to Official Action dated November 12, 2009

7. (Previously Presented) A heat-shrinkable multi-layer film according to claim 1,

wherein the polyvalent metal compound (B) is a divalent metal compound.

8. (Previously Presented) A heat-shrinkable multi-layer film according to claim 1,

wherein the poly(carboxylic acid) polymer (A) is a homopolymer or copolymer formed of at

least one polymerizable monomer selected from among acrylic acid, maleic acid, and

methacrylic acid, and/or a mixture of such homopolymers or copolymers.

9. (Previously Presented) A heat-shrinkable multi-layer film according to claim 1,

which contains an additional layer.

10. (Original) A heat-shrinkable multi-layer film according to claim 9, wherein the

additional layer is an adhesive-containing layer.

11. (Previously Presented) A heat-shrinkable multi-layer film according to claim 1,

which, after thermal shrinkage treatment, exhibits an oxygen permeability equal to or lower

than that before thermal shrinkage treatment.

12. (Currently Amended) A heat-shrinkable multi-layer film comprising a heat-shrinkable

base film and, provided on at least one surface of the base film, at least one layer structure

including a layer (a) formed of a poly(carboxylic acid) polymer (A) and free of polyalcohol,

and a polyvalent-metal-compound-containing resin layer formed of a polyvalent metal

compound (B) and a resin, the layer (a) and the resin layer being in contact with each other,

wherein the layer structure is not oriented, wherein the multi-layer film exhibits a percent

thermal shrinkage in at least one direction of 5 to 90% as measured by immersing the multi-

layer film in hot water at 90°C for 30 seconds, wherein the multi-layer film exhibits an

oxygen permeability of 100 cm³/(m²·day·MPa) or less as measured at 30°C and a relative

humidity of 80% after thermal shrinkage treatment, and wherein the base film exhibits a

percent thermal shrinkage in at least one direction of 5 to 90% as measured by immersing the

base film in hot water at 90°C for 30 seconds.

13. (Previously Presented) A packaging material comprising a heat-shrinkable multi-

layer film as recited in claim 1.

14. (Previously Presented) A packaging material according to claim 13, which is in the

form of a bag, a sheet, a label, a container, or a cover material.

15. (Previously Presented) A packaged product obtained by packaging an object with a

heat-shrinkable multi-layer film as recited in claim 1.

16. (Cancelled).

17. (Previously Presented) A heat-shrinkable label comprising a heat-shrinkable multi-

layer film as recited in claim 1.

18. (Original) A heat-shrinkable label according to claim 17, to which a heat-sensitive

tackifier has been applied.

19. (Previously Presented) A packaging material comprising a heat-shrinkable multi-

layer film as recited in claim 12.

Amendment dated March 12, 2010
Reply to Official Action dated November 12, 2009

- (Previously Presented) A packaged product obtained by packaging an object with a heat-shrinkable multi-layer film as recited in claim 12.
- (Previously Presented) A heat-shrinkable label comprising a heat-shrinkable multilayer film as recited in claim 12.
- (Previously Presented) A heat-shrinkable label according to claim 21, to which a heat-sensitive tackifier has been applied.
